Boost Pocket digestion and post-processing

The livestock sector is currently under pressure. Both energy and fertiliser prices are high because of the conflict between Russia and Ukraine. But there are already technologies that can help farmers become more self-sufficient in these areas. With the demonstration project 'Boost pocket digestion and post-processing', we aim to raise (renewed) awareness of pocket digestion and post-processing of manure or digestate.

The specific objectives of the demonstration project are to

to make livestock farmers aware of pocket digestion with further post-processing
to support interested livestock farmers in possible implementations

Partners: Inagro, Biogas-E, Innovation Support Centre and VCM

Type of project/funding: Demo project

Duration: 01/01/2023 - 31/12/2024

Supported by: European Agricultural Fund for Rural Development: Europe is investing in its countryside (www.vlaanderen.be/pdpo)
